

Pharmacy

You work in a pharmacy that offers a wide range of services including consultations for vaccination and contraception. You want to provide a private area for people coming into the pharmacy but are limited by space restrictions.

Things to consider:

1

What are the needs of people in your community who access the pharmacy?

3

Are staff aware they engage with many people each day who have experienced child sexual abuse and/or sexual violence?

2

Does your pharmacy provide a way for people to engage in private conversations with staff?

4

How would you know if people feel safe in the pharmacy?

Safer spaces must include consent and choice

Everyone can contribute towards safety
